Top equipment suppliers share their best and most bizarre fitment success stories.

## DUCATI TEAM TESTS **BOSCH** WIRELESS CHARGING SYSTEM

**BOSCH PROFESSIONAL POWER TOOLS** has entered the world of high-octane motorcycle racing with the official Ducati Corse teams in MotoGP and Superbike for the 2015 season. The two companies share various mutual values: dedication to technology, innovation, and continuous search for high performance. These are the main reasons why Ducati Corse chose the Professional 18V Li-Ion range with the new Wireless Charging System for assembling, adjusting and setting up its prototype motorcycles.

The Ducati Team was among the first companies to use and test the innovative Wireless Charging System and its great

advantages for professional users. Mechanic for the Andrea Dovizioso Team, Mark Elder explains; "At the race we have to work with perfect accuracy. At the same time we have to deal with extreme time pressure. The Wireless Charging System from Bosch meets the challenges perfectly."

With the launch, Bosch has opened up a new dimension in charging technology; contactless energy transfer is especially beneficial in stationary applications, where it is considerably more cost-effective than conventional charging systems because it eliminates the need for a second battery.
